Profile

I am a high-school student and independent builder from Nepal. I started exploring technology at 13 after discovering Telegram bots while studying in class 8. Since then, I have been learning through free courses, Udemy, documentation, and hands-on projects. My focus is building useful bots, automations, web apps, browser extensions, and early AI/ML experiments. I am currently open to freelance work, collaborations, and junior opportunities where I can learn quickly and contribute reliably.

Technical Skills

Languages & frameworks

Python, JavaScript, TypeScript, HTML/CSS, Kotlin, C++,
Flask, React

Web & tooling

REST APIs, Git/GitHub, browser extensions, Three.js, local-first tools, deployment experiments

Selected Projects

NepBot — GitHub

WhatsApp linked-device bot dashboard with pairing workflow, country-code validation, feature controls, and a Python-facing service.

NepaliCode — GitHub

Nepali-inspired programming language direction, runtime ideas, and Kotlin/Compose Android IDE concept.

Nepali IDE — GitHub

AI-native Android coding workspace direction with Python execution, live preview, Git integration, and project history.

NepToons — GitHub

Flask streaming-library experiment with HLS playback, authentication, profiles, favorites, and a GitHub Pages preview.

Education & Direction

Current education: High school student in Nepal.

Learning path: Free YouTube programming courses, Udemy, documentation, open-source code, and continuous project-based practice.

Career direction: Bot development, web automation, Python development, web applications, AI/ML, and developer tooling.

Links & Availability

Code & profiles

GitHub · GitLab · Gitea · LinkedIn

Support

Ko-fi · Buy Me a Coffee

Automation & bots

Telegram and chat-bot development, web automation, scheduling, media workflows

Currently learning

AI/ML concepts, Android development, language/runtime design, stronger software architecture

NepTLS — GitHub

Dependency-light Python HTTP client and TLS research toolkit for authorized diagnostics and networking experiments.

Automate YT Channel — GitHub

Authorized creator workflow automation for media import, rendering, metadata generation, uploads, duplicate protection, and scheduling.

World Explorer — GitHub

Explorable React and Three.js portfolio with 3D routes, gesture controls, and a Code City quest.

KnightSense Chess Engine — GitHub

Manifest V3 Chrome extension for local Stockfish chess analysis with evaluations, saved positions, and MultiPV lines.

Social & work

YouTube @gatewaymaker · X @a1diwas · Fiverr · Email

Availability

Open to freelance projects, collaborations, and junior opportunities.
