Profile

I started building at 13, while studying in class 8, after discovering Telegram bots. Since then I have learned through free YouTube courses, Udemy, documentation, and hands-on experiments. I build bots, web automations, APIs, extensions, and web apps, while growing into AI/ML and developer tooling. I am open to freelance work, collaborations, and junior opportunities.

Skills & Focus

Languages: Python, JavaScript, TypeScript, HTML/CSS, Kotlin, C++
+

Frameworks: Flask, React, Three.js, Jetpack Compose

Tools: Git/GitHub, REST APIs, browser extensions, local-first tools

Selected Work

NepBot · [GitHub](#)

WhatsApp linked-device bot dashboard with pairing flow, country-code validation, controls, and a Python-facing service.

NepaliCode · [GitHub](#)

Nepali-inspired programming language direction, runtime ideas, and Kotlin/Compose Android IDE concept.

Nepali IDE · [GitHub](#)

AI-native Android coding workspace direction with Python execution, live preview, Git integration, and project history.

NepToons · [GitHub](#)

Flask streaming-library experiment with HLS playback, authentication, profiles, favorites, and preview.

Education & Direction

Current education

High-school student in Nepal.

Learning path

Free programming courses, Udemy, documentation, open-source code, and project-based practice.

CONTACT & SOCIALS

X @a1diwas · YouTube @gatewaymaker

Telegram @diwazz · Telegram @diwasxd

GitLab · Gitea

Fiverr · Ko-fi

Buy Me a Coffee

Core strengths: Telegram and chat-bot development, web automation, API integration, scheduling, media workflows

Growing into: AI/ML concepts, Android development, programming-language/runtime design, stronger software architecture

NepTLS · [GitHub](#)

Python HTTP client and TLS research toolkit for authorized diagnostics and networking experiments.

Automate YT · [GitHub](#)

Creator workflow automation for media import, rendering, metadata, uploads, duplicate protection, and scheduling.

World Explorer · [GitHub](#)

Explorable React and Three.js portfolio with 3D routes, gesture controls, and a Code City quest.

KnightSense · [GitHub](#)

Manifest V3 Chrome extension for local Stockfish analysis, evaluations, saved positions, and MultiPV lines.

Career direction

Bot development, Python, web automation, web applications, AI/ML, and developer tooling.

Availability

Open to freelance projects, collaborations, and junior opportunities.
